## Reduce Your Water Usage and Your Bills

Water conservation starts at home, where our daily use of faucets, showerheads, dishwashers and toilets all add up to some unsightly numbers. Fortunately, you can dramatically reduce your water usage through helpful tips you can use throughout your home.

- Replace older, less efficient toilets with 1.28-gallon High-Efficiency Toilets (HETs) to save up to 16,500 gallons of water per year.
- Swap out your 2.75 gpm shower head with a 1.75 water-conserving shower head and you can save more than 7,700 gallons of water per year. *\*Based on an average of seven-minutes for a family of four.*
- Fix leaky faucets and install faucets with water-saving aerators to effortlessly save hundreds of gallons of water per year.
- Use the appropriate water level and load size on the washing machine when doing laundry. Consider purchasing a front-load washing machine.
- Use a broom rather than a hose to clean off driveways, steps and sidewalks
- Water your garden during the coolest part of the day, generally in the morning, and avoid watering on windy days.
- Turn off the water while brushing your teeth or shaving to keep excess water from going down the drain.
- Landscape with native or low-water plants to significantly reduce water usage outside the home.
- Use leftover water for houseplants, instead of pouring out a half-empty glass of drinking water.
- Make sure the dishwasher is fully loaded to maximize the dishes cleaned in a cycle.

Peterman Plumbing & Heating is your area expert on Green living. Contact us for more information on High Efficiency Toilets, Water Conserving Shower Heads/Hand Showers or Faucets and other energy saving products.
